

FOOD WASTE RECYCLING

Green Power

FROM FOOD WASTE TO RENEWABLE ENERGY

ARE YOU A FOOD WASTE PRODUCER, COLLECTOR OR LOCAL AUTHORITY?

Efficient food waste recycling is not your core business but you will feel a huge impact on your operation if your recycling partner doesn't get it right.

WE ARE ONE OF THE LARGEST AND MOST EFFICIENT FOOD WASTE RECYCLERS IN THE COUNTRY AND WE'RE HERE TO HELP YOU

We have 8 market leading Anaerobic Digestion (AD) facilities spanning a wide reach across Derbyshire, the Midlands, Oxfordshire, London and South Wales.

We convert your food waste into renewable energy and fertiliser that helps to grow more food. Achieving significant carbon savings along the way.

OUR AD FACILITIES DEPACKAGE AND DIGEST YOUR FOOD WASTE

Recycling it into:

1. **Biogas** (methane and carbon dioxide) which is either converted into renewable electricity via gas engines, or upgraded to Biomethane, and exported to the National Grid to fuel homes and businesses
2. **Digestate** (a nutrient-rich liquid fertiliser) which is spread on local farmland reducing the use of fossil-fuel derived chemical fertilisers

We've been refining our process for over 9 years and can guarantee 100% plant availability; you can rely on our doors always being open.

- » we're competitive
- » we're adept at handling many types of food waste
- » we're a truly sustainable business

THE WASTES WE CAN HANDLE

Our facilities are able to accept a wide variety of food wastes including category 3 Animal by-products:

- Food and beverage production wastes (both solids and liquids)
- Waste packaged food such as stock clearances, factory breakdowns, out of date or QC failed products
- Restaurant and catering wastes
- Bakery and bread products
- Local authority kerbside collected food waste
- Organic liquids and very wet wastes such as compost leachate, alcohols, fats and oils

We can handle material presented in bulk, dolavs, bins, IBC's, pallets and barrels. We can also clean these receptacles as part of our service if needed.

DEALING WITH PACKAGING AND CONTAMINATION

All of our sites have robust front end depackaging systems. Meaning that we can accept a wide variety of food wastes containing various types of primary and secondary packaging.

The only types of packaging we can't handle without special arrangement are: Glass, textiles, tertiary packaging and canned material.

FACILITIES

- Our sites provide near national coverage, ideal for managing national contracts from large retailers and food distributors, and we handle wastes in ways that flex with individual logistics needs
- We're open at convenient hours and our staff are friendly, helpful and approachable
- We turn delivery vehicles around quickly averaging at less than 10 minutes per tip
- Our sites are always clean and we offer all delivery drivers great facilities; they will enjoy tipping with us

OUR AVERAGE VEHICLE TURNAROUND TIME IS LESS THAN 10 MINUTES

DELIVERY VEHICLES

We can accommodate most types of waste vehicles:

- Tipping and walking floor bulkers
- Refuse collection vehicles from 7.5t-26t including side tipping pods
- Curtain siders
- Roll on - roll off, including wagon and drag
- Skip and compactor vehicles
- Liquid tankers

RELIABILITY

We know that your waste streams need to move seamlessly so we ensure our doors are always open. We offer 100% off-take guarantees to our contracted customers.

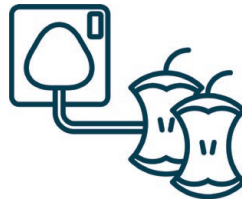

UNDERSTANDING OUR CUSTOMERS' NEEDS

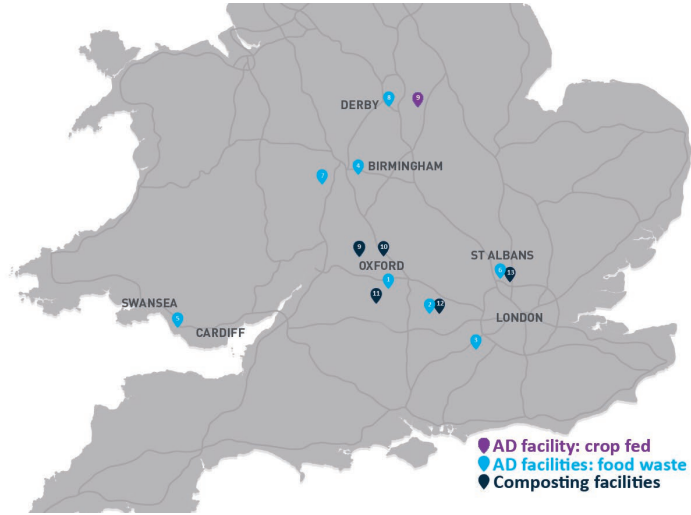

- We recycle 1/2 million tonnes of organics each year
- Our team of account managers have worked in the industry collectively for over 110 years so we understand your drivers and needs
- We work with over 50 local authorities and we're well versed in working with councils to positively engage their residents and increase capture rates

COMPLIANCE AND ACCREDITATIONS

- Our AD facilities are PAS 110 accredited
- They all hold the required operating permits, licences and procedures to underpin safe and compliant operations
- Our business operates with a full suite of ISO accreditations: 14001 (Environmental Management), 9001 (Quality Management) & 18001 (Health & Safety)

Operating just one of our food waste recycling facilities has the net carbon benefit equivalent to taking 89,000 cars off the road
